SKILLS

EDUCATION

IT Professional (Web Development)
Aug 2012 – Aug 2013
Level 3 Diploma

ICT – BTEC National, History, Media Studies
Sept 2010 – May 2012
A Level

AND Digital Product Developer

Since Sept 2021

As a Product Developer at AND Digital I have experienced multiple projects across multiple clients all with different needs to help them develop and deliver digital products and platforms.

- Front End Solution Architect @ British Airways: Platform champion for over 20 applications within the BA space. Served as the central support point for team queries and issues, including assisting with application upgrades and migrations to AWS and Angular. Additionally, contributed to front-end architecture roadmaps and CI/CD strategies.
- Full Stack JS Tech Lead @ Vixio: I led development of a compliance task management platform that helps users track and manage regulatory updates within their sector. The Vue front end used Tailwind and PrimeVue, with a NestJS backend exposing GraphQL for the client and REST endpoints to communicate with the Vixio Core Platform, using Prisma as the ORM. I also owned CI/CD via GitHub workflows into AWS, using S3, Fargate/ECS, PostgreSQL, Redis, SES, Cognito, and CloudWatch.
- Full Stack JS Developer @ AND Business Platform: AND built their own platform for managing holidays, clients, expenses, etc. It is a full-stack JavaScript app using React and Node.js with TypeScript. I helped maintain Node.js services in a microservice architecture that uses Serverless, DynamoDB, SNS, and Redshift to build out its API endpoints. Simultaneously, I built new and improved UI experiences on the client side to offer a seamless interface for ANDis.

Amigo Partnership Lead Front End Engineer

Mar 2020 – Sep 2021

I developed a variety of web applications for multiple clients using React (NextJS) and Angular, integrating headless CMS APIs like Contentful, Sitecore, and Sanity. As our engineering team expanded, I implemented DevOps practices across all projects to reduce bugs and enhance code quality. These practices included testing with Jest, Enzyme, and Cypress, as well as CI strategies and release management across environments. Additionally, I

collaborated with senior leadership to improve our client delivery process while exploring innovative work methodologies.

IPUSHPULL

Front End Engineer

Apr 2019 – Mar 2020

As part of a small engineering team, I helped build a platform that gives clients access to live data across multiple applications using the Ipushpull platform. I led the migration of our main webapp from AngularJS to Vue, creating a reusable component architecture for integrations with Slack, Symphony, and Microsoft Teams. Additionally, I implemented a Test-Driven Development (TDD) approach using Jest and Cypress to enhance our DevOps practices.

Amigo Partnership

Front End Engineer

Aug 2015 – Mar 2019

As part of a small engineering team at a digital agency, I developed and maintained a bespoke CMS using React and an API using GraphQL and Ruby on Rails. I leveraged this CMS to create websites and applications for various clients, including Rolls-Royce and 02, using React and Vue.

McCormack & Morrison

Junior Front End Engineer

Oct 2013 – Aug 2015

I joined a digital agency to create responsive emails within Salesforce for clients like Royal Caribbean and Virgin. After 6–8 months, I began helping the team maintain and build WordPress websites for clients. Throughout this experience, I learned about new technologies and patterns in CSS and JavaScript.
